

TRANSPORT PACKAGING

Shipping solutions to fit any size equipment.

We are Your Leader in Logistics Solutions for shipping motorcycles, ATVs, snowmobiles, and other motorized or recreational equipment. We have earned the reputation for excellence in packing, crating, and shipping motorcycles and heavy ATVs across town or overseas by container. We work only with our trusted logistics partners to ensure your motor equipment arrives to its destination safely and on-time.

Shipping motorcycles is similar to shipping automobiles: there are a number of things to consider to ensure your motorcycle or any other recreational vehicle you need to ship arrives safely. Our shipping experts help determine how you want to ship your motorcycle – either by open or closed trailer, depending upon the distance to its final destination. We will assist in preparing your motorcycle or ATV for transport, including providing quotes and best packing methods.

Whether you are the sole owner of your motorcycle, or a dealer needing to ship an entire showroom overseas, we has the experience, the expertise, and the carrier network to handle all of your motorcycle transportation needs. We will handle all of the logistics in shipping your motorcycle or ATV from pick-up and preparation to its final destination arrival.

CONTAINER SHIPPING:

If you select the terminal to terminal container shipping option, the shipper provides a heavy duty metal container specifically designed for transporting bikes (maximum inside dimension 98"L x 44.6"W x 47.6"H). You are required to bring the bike to the shippers origin terminal and pick up the bike at the shippers destination terminal. Terminals are located near the main airports in each city the shipper services. You are required to drain the fluids and disconnect the battery prior to placing the bike in the shippers container.

You are required to provide four motorcycle type tie downs and to secure the bike inside the shippers container yourself. The wheels of the bike fit into a track in the floor of the container and tie down loops are provided on the inside of the container for the tie downs to hook into. You are also required to provide locks for the container doors. You are required to unlock, untie, and remove the bike from the shippers container at the destination terminal.

Note: Smaller heavy duty plastic containers are available for small bikes less than the standards sized container rates listed on our Sample Rates page (maximum inside dimensions 61"L x 44.5"W x 44"H, maximum weight 500

pounds). Larger heavy duty metal containers are available for large bikes for approximately \$210 more than the standards sized container rates listed on our Sample Rates page (maximum inside dimensions 118"L x 44.5"W x 59"H).

The container shipping company only ships terminal to terminal. Click [here](#) for a list of the nearest Terminal Locations for container shipping. The terminals are usually open on weekdays only but most terminals are open late in the evening. Container Shipping Rates include the use of the shippers container.

CRATED SHIPPING:

You can also provide your own crate, crate the bike, drop off and pick up the crated bike at the crated shipping company's terminals. The maximum allowable outside crate dimensions are 98"L x 47"W x 50"H. You might be able to find a used crate at a local bike shop.

The shipper provides insurance coverage per pound of the bike shipped at no extra charge. Additional insurance coverage is available on certain routes, there is a minimum charge of insurance coverage if so.

Also check with your bike insurance company. Your bike insurance company might provide insurance during transport. You will be able to track your shipment online from start to finish.

Fluids should be drained from the bike and the battery disconnected. The bike needs to be fully enclosed. The crated shipping company requires the sides and top of the crate to be covered with 1/4 or 3/8 inch plywood.

Crated shipments are required to be dropped off/picked up at the shippers terminals. Crated rates do not include the crate, you are responsible for providing the crate and crating the bike.
